

Project Title

Group Names

Graduating Year

Faculty Advisor Name

Project Outline

- Give a brief outline what the presentation should will
- **Keep in mind that the presentation should be no longer than 25 minutes, with 5 minutes of Q&A inclusive**

Problem Identification / Objective

- Provide brief points about your problem statement and objective of your project

Total: 1 slide

Brief Review of Literature (Optional)

- This is optional, provide a summary what is found in the literature (peer reviewed studies). Identify where your study fits within the existing literature or gap will fill.
- **Total: 1 slide**

RQ / Hypothesis

- State your RQ and hypotheses that your project tested

Total: 2 slides

Data Collection and Preparation

Provide a clear explanation of your dataset, including its source, key variables, and overall structure. Detail the steps taken to prepare the data for analysis, such as cleaning procedures (e.g., handling missing values, removing duplicates, or addressing inconsistencies), preprocessing, and formatting to ensure its readiness for analysis. This section should demonstrate your understanding of data preparation as a critical step in the analytics process.

Total: 2 slides

Statistical Analysis and Diagnostics

These slides should summarize the methods used to analyze the data and ensure its reliability. Highlight how the analysis supports your research objectives, and include any steps taken to validate the results, ensuring accuracy and relevance. Focus on presenting key findings and their implications for your project.

Total: 2 slides

Data Visualization

- These slides should include your data visualizations, make sure you cite and use proper labels

Total: 4 slides

Findings and Discussion

- Summary of your findings

Total: 2 slides

Recommendations

- List your recommendations

Total: 1 slide
